

Selected Ward Based Health Statistics for the Joint Strategic Needs Analysis

The first five attached figures consist of charts which show two ward-based maps,

- The top map (consistent to all sheets) shows ward ranking (by 20% quintile) in the 2007 index of deprivation.
- The lower map shows ward rankings (by 20% quintile) for the selected health topic
- The scatter graph on the right shows the strength of the correlation between deprivation and the statistic in question.
- There is a strong positive relationship with deprivation in all the mortality statistics shown but a contrast in admission statistics between, for example, alcohol-related admissions and admissions for hip replacements.

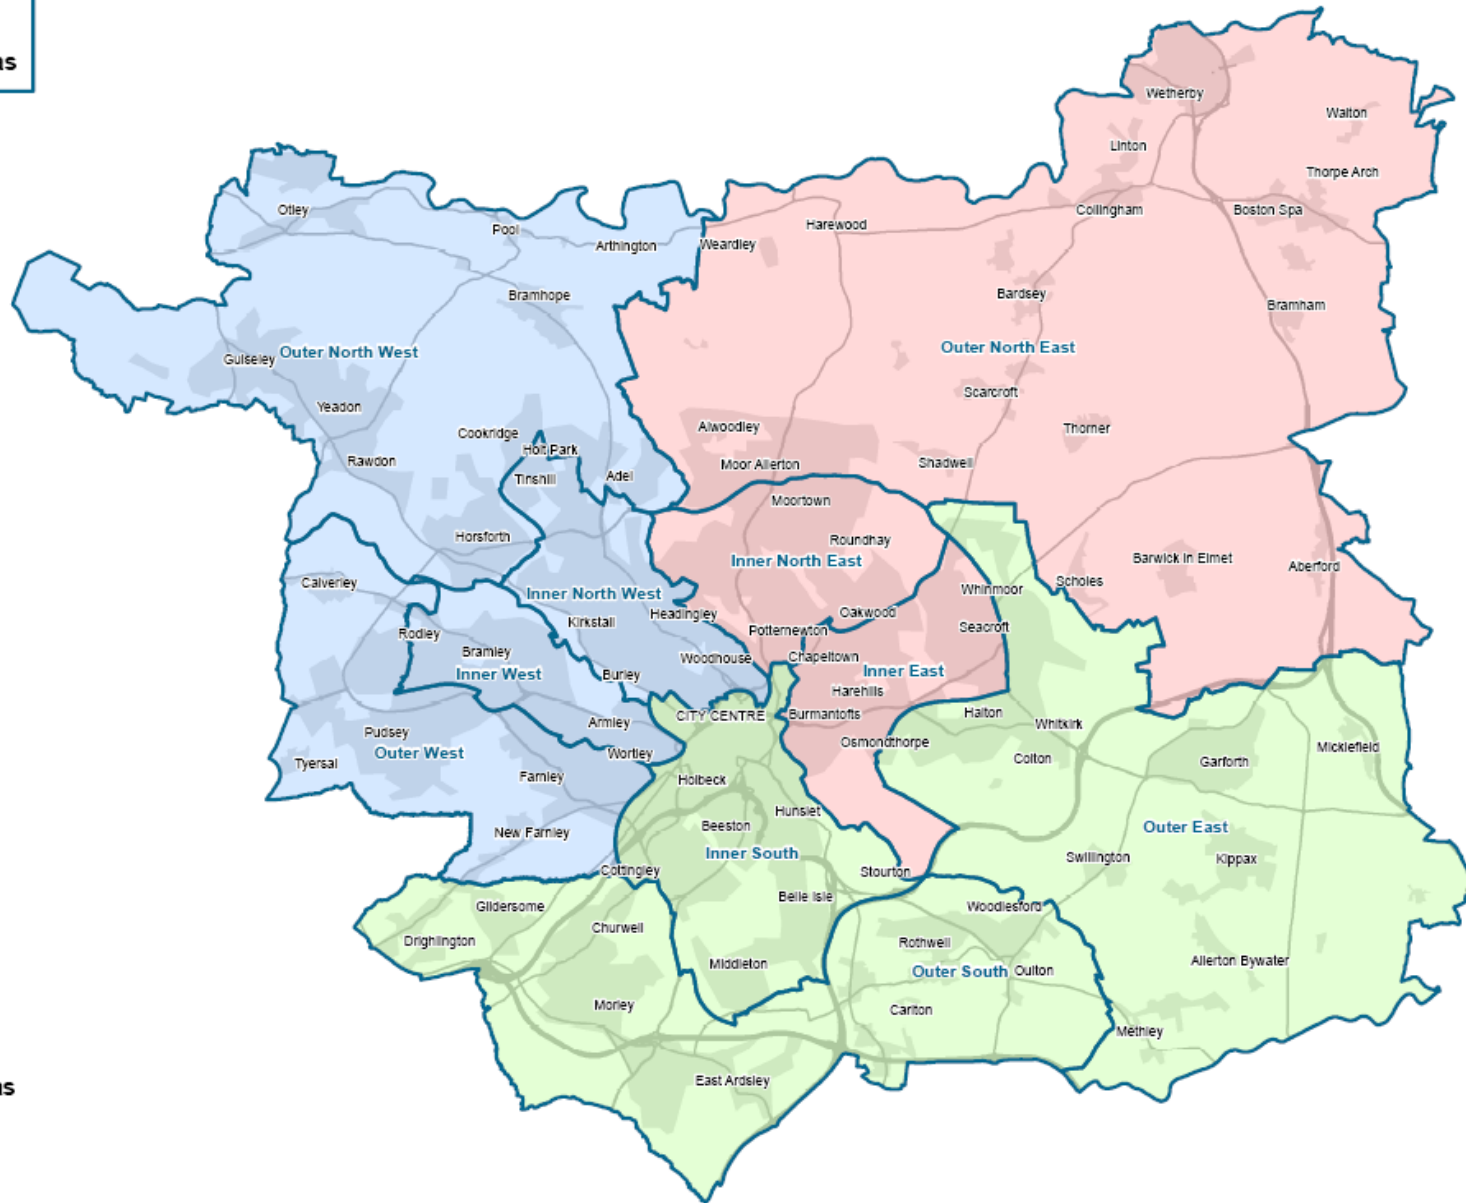

The final map gives the directly standardised All Age All Cause mortality rates by ward with figures for 2005-7.

Tables giving all the relevant figures are available as part of the JSNA datapack and associated on-line support.
